Like the steam much but made preference
the following changes - only.

No 1. Front elevation. The central part has
much like a dwelling. I would make
double windows in the center
as a 6' x 10' 1/2' - Round the
downward windows & take away
the new like long - using chimneys

No 2. Bring the three gable windows a little
lower down.

No 3. Rearrangement. Rear side be cheaper
than walls for the joints - the kitchen is
not a dining room under one and a kitchen
under the Com. & Rooms - But is not necessary
if the brooding be built can board the people.
No 4. Main Room - no change but to place
the benches nearer together if necessary.
You can see the two small rooms for
closets - or as Com. & Rooms - over them
is a large large enough for my for dufts
& your religious meetings in case matter.
The height of the big house, is divided be-
tween three. Lower & upper Rooms - &
it has a stairway up into the large
light.
