to have the corner room above
 & conduct the smoke pipes
 into the flues already in the
 end walls of the building.
 This would afford some heat
 (either from a furnace or a stove-pipe
 passing through) in every room
 on the 2nd floor but three.
 These students who do not find
 their rooms sufficiently warm
 to study in, can use the large
 study-room, making one of
 the other ones responsible for
 good order, as is done in many
 schools. By putting a cold
 or water-pipe in the store in the
 Day-Room, hot water can be
 provided for 2 bath-rooms which
 we propose to put instead of the

Dear friend

Francis T. King thinks

well of all the alterations in
 the plans for the old meeting-
 house ~~suggested~~ by you, and
 Arthur has drawn a sketch of the
 second floor as now proposed,
 which I enclose herewith.

We propose to follow the suggestion
 of carrying the smoke-pipes from
 the store on the first floor up
 to the room overhead into a
 chimney & thence into a brick chimney
 situated on the attic floor & passing
 through the roof: the store on
 the first corner of the building
 can be utilized in the same way
